SKILLS

Testing & Hardware: Consumer electronics QA inspection, functional and cosmetic testing, defect reporting, Android and iOS devices (smartphones, tablets, smartwatches), SOP-driven inspection workflows

Programming & Automation: Python (primary), Java, JavaScript, C, R, SQL, scripting and automation,

Tools & Platforms: Git, CI/CD, AWS (Cloud Foundations certified), Linux, React Native, PostgreSQL, MySQL

ML & Data: TensorFlow, PyTorch, scikit-learn, XGBoost, pandas, vision-language models, Power BI, Tableau

EXPERIENCE

Quality Assurance Operative, Ingram Micro Sept 2026 – Present

- Inspected smartphones, tablets, and smartwatches against defined quality standards, covering cosmetic grading and functional checks before units were released
- Tested Android and iOS devices across multiple manufacturers and models, identifying hardware and software faults and routing failed units for rework
- Logged inspection results and defect details in the site tracking system for device-level quality records
- Followed standard operating procedures and equipment-handling and safety requirements in a high-volume consumer electronics environment

Web Developer (Part-Time), Rephrain, UKRI Research Centre Dec 2025 – Jun 2026

- Maintained web infrastructure for a UKRI-funded, multi-university research centre focused on privacy, online harm reduction, and adversarial influence
- Deployed site and content updates in a live production environment, coordinating requirements with researchers across partner institutions

PROJECTS

UKAHT Site Monitoring Pipeline *(Python, Qwen3-32B, Qwen2.5-VL-72B, XGBoost)*

- Built an automated condition-monitoring pipeline for historic Antarctic expedition huts managed by the UK Antarctic Heritage Trust, in a 3-person team supervised by a University of Bristol academic
- Owned the degradation forecasting component (Qwen3-32B, deployed as a material predictor service) and wrote the validation chapter assessing its reliability
- Redesigned the risk model around Antarctic-specific hazards (salt defibration, wind abrasion, UV photodegradation, interior biodeterioration) and validated a vision-language model for identifying materials and condition from site images

Indian Sign Language Translator *(Python, TensorFlow, OpenCV)*

- Built a real-time OpenCV pipeline translating live webcam hand signs to text on local hardware
- Fine-tuned ResNet50 on ~51,000 ISL alphabet images to reach 96.4% validation accuracy, using data augmentation and regularisation to improve generalisation

Content-based Music Recommendation Engine (Python, KNN, TF-IDF)

- Architected an end-to-end machine learning pipeline to analyse and recommend similar music tracks from a dataset of 10,000 songs.
- Developed a content-based filtering model utilising Principal Component Analysis (PCA) and K-Nearest Neighbours (KNN) to calculate track similarity based on tempo, timbre, and description (TF-IDF).

EDUCATION

MSc Data Science, University of Bristol 2026

BSc (Hons) Computer Science, First Class Honours, University of Hertfordshire 2025

Certifications: AWS Academy Cloud Foundations (Oct 2025), IBM Data Analysis with Python (Oct 2025)
